Abstract
A single paragraph of about 200 words maximum. For research articles, abstracts should give a pertinent overview of the work. We strongly encourage authors to use the following style of structured abstracts, but without headings: 1) Background: Place the question addressed in a broad context and highlight the purpose of the study; 2) Methods: Describe briefly the main methods or treatments applied; 3) Results: Summarize the article's main findings; and 4) Conclusions: Indicate the main conclusions or interpretations. The abstract should be an objective representation of the article, it must not contain results which are not presented and substantiated in the main text and should not exaggerate the main conclusions.

Keywords:
keyword 1; keyword 2; keyword 3 (List three to ten pertinent keywords specific to the article; yet reasonably common within the subject discipline.)

1. Introduction

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be reviewed carefully and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research.[1]

2. Materials and Methods

Materials and Methods should be described with sufficient details to allow others to replicate and build on published results. Please note that publication of your manuscript implicates that you must make all materials, data, computer code, and protocols [1] associated with the publication available to readers. Please disclose at the submission stage any restrictions on the availability of materials or information. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

Research manuscripts reporting large datasets [2] that are deposited in a publicly available database should specify where the data have been deposited and provide the relevant accession numbers. If the accession numbers have not yet been obtained at the time of submission, please state that they will be provided during review. They must be provided prior to publication.

Interventionary studies involving animals or humans [3], and other studies require ethical approval must list the authority that provided approval and the corresponding ethical approval code.

[For] (i) Enjoyment; (ii) Good entertaining films; (iii) Greater understanding of [the] issue portrayed; (iv) Insight into literature and film making; (iv) Discussion on current perspectives in treatment or research on topic; and (v) Opportunity to socialise and catch up with friends. 3. Results

This section may be divided by subheadings. It should provide a concise and precise description of the experimental results [4], their interpretation as well as the experimental conclusions that can be drawn.

3.1. Subsection

3.1.1. Subsubsection

Bulleted lists look like this:

- First bullet;
- Second bullet;
- Third bullet.

Numbered lists can be added as follows:

1. First item;
2. Second item;
3. Third item.

The text continues here.

3.2. Figures, Tables and Schemes

All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

Figure 1: This is a figure, Schemes follow the same formatting. If there are multiple panels, they should be listed as: (**a**) Description of what is contained in the first panel. (**b**) Description of what is contained in the second panel. Figures should be placed in the main text near to the first time they are cited. A caption on a single line should be centered.

Table 1: This is a table caption. Tables should be placed in the main text near to the first time they are cited.

Title 1	Title 2	Title 3	Title 4
Entry 1 *	Data	Data	Data
	Data	Data	Data
	Data	Data	Data
Entry 2	Data	Data	Data
	Data	Data	Data
	Data	Data	Data
Entry 3	Data	Data	Data
	Data	Data	Data
	Data	Data	Data

* Tables may have a footer.

4. Discussion

Authors should discuss the results and how they can be interpreted in perspective of previous studies and of the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted.

5. Conclusions

This section is not mandatory, but can be added to the manuscript if the discussion is unusually long or complex.

6. List of abbreviations

The content here.

7. Notes

[1] This is an example for note.

8. Author Contributions

This section should contain contributions made by each author in the preparation of the article.

9. Funding

Authors are required to disclose all sources of funding. This includes grants, scholarships, sponsorships, or any financial contributions. Details such as the name of the funding agency, grant number, and specific requirements set by the funding body should be clearly stated.

Examples:

- No external funding was received for this research.
- The funding for this research was provided by [name of funder], grant number [xxx].

10. Availability of Data and Materials

Authors should mention the source of data and materials with the links of publicly archived datasets analyzed or generated during the study.

11. Consent for Publication

If authors have used details, images, or videos of a person, written consent from the relevant individual must be taken to publish under Creative Commons Attribution License 4.0. If an individual is under 18, parents or legal guardians must be contacted for their consent.

2026, Vol. 1, Issue 1
doi:10.x/journal.x.x.x

12. Conflict of Interest

Authors are strongly recommended to disclose any potential conflict of interest to safeguard the integrity of the research and scholarly content published.

13. Acknowledgments

Please acknowledge those who have contributed to the manuscript, particularly in language editing, writing support, and proofreading services.

14. AI Declaration

Please state whether AI tools were used in the preparation of this manuscript. If so, include the tool name, version number, and the extent of their use (e.g., limited to proofreading, substantial text generation).
